Chaabi Hiring'23

Problem Statement:

> 💡 Given a data source (csv per say), build a Query Engine for English language.

Data Source:

> BigBasket's Products List data: <u>Link</u>

Deliverables:

- Implement vector embeddings on the given dataset and store them in a Vector DB like <u>Qdrant</u>.

- Implement an LLM on the DB that can give contextual answers to the queries strictly from the database.

- Wrap this LLM as an API using any framework.

Submission:

- Push your code to a <u>github</u> repository with clear instructions on setup and the results of a few sample queries in a readme file.

- Add <u>dev@chaabi.co</u> as a contributor to the repository by Nov 25'23.

- Send via email to <u>dev@chaabi.co</u> with subject `[SUBMISSION] - <campus> <roll_no>` containing the link to your repository and the readme file.
